

Catchment Management Workshop

A technical workshop for farmers, riparian owners, land, and river managers; good farming practice, agri-environment options and CSF grants can all help reduce diffuse pollution from sediment, nitrates, phosphates and pesticides. This Marlborough Downs NIA workshop led by Tim Clarke and Peter Thompson will look at ways to reduce and mitigate the effects of pollution on watercourses, and how this benefits wildlife and biodiversity. We will also demonstrate some of the sampling techniques used to measure river water quality.

- ✓ **Please wear clothing and footwear suitable for walking outdoors**
- ✓ **Booking essential**

When: Monday 16th June 2014
Where: Draycot Foliat (precise location given on booking)
